

# GATEKEEPER

## Automated Visitor Access Roster

After 9/11, military bases went to higher level of THREATCON. Most bases which were previously open access now needed automated physical access control.

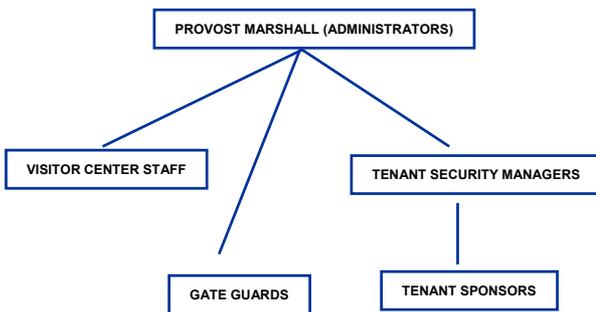

GATEKEEPER is a secure, web-based, visitor access authorization and monitoring program for base wide access control. Approved tenant sponsors nominate visitors for base access. Visitor Center personnel or MPs at the gate posts access the system to verify credentials of those desiring access.

Additional components can include secure wireless LAN equipment for base gate connectivity and secure wireless PDAs for roadside visitor verification.

Supports 1 day visits, multi day visits and special occasions such as conferences and social events.

### Operational Features

- Eliminates paper based credential verification
- Supports 5 hierarchical levels of users

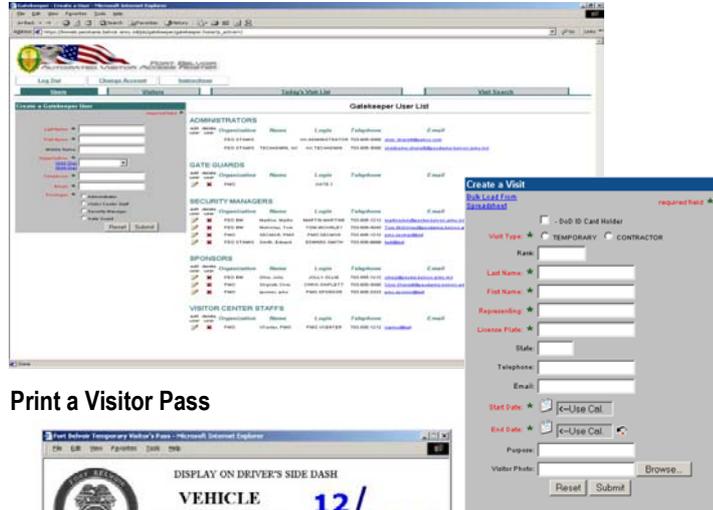

- Instantaneous data update
- Visitor center personnel can print a pass
- Bulk loading of people attending a special event
- Rich and full data query and archive

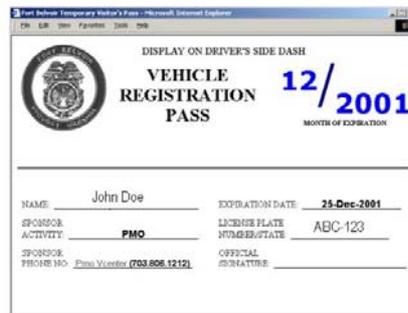

### Technical Features

- 100% internet based
- Secure (SSL) and password access controlled
- Oracle based
- NIST/FIPS wireless LAN
- Optional hardware components include products from Cisco, Fortress Technologies and Compaq

### Simple screen entry

### Print a Visitor Pass

### Availability

PEO EIS developed the application for Ft Belvoir and the application is available for free\*.

\*Program Manager Installation Support Modules will work with any installation on a reimbursable basis to set up the software and acquire any wireless/PDA hardware. Oracle licenses and servers may be required.
